

DigiTour

DigiTour, the smartest guide for museums

DigiTour is a most advanced multimedia guide application for mobile devices with touch technology, which opens up your collection in an exciting new way. DigiTour combines audio information with graphically rich, interactive content. Pictures and videos help your visitors understand the works in your collection. Modern touch screen technology makes DigiTour an easy to use mobile museum guide, providing information where visitors need it – in front of the viewed museum object.

Specials for children

For young visitors, we develop special tours that transform a museum visit into an exciting scavenger hunt. Every object tells its individual story that invites the young viewer to have a closer look and learn about art and cultural backgrounds. And sometimes amiable cartoon characters explain complex things in funny, easy ways.

It's quality that matters

We know that carefully produced high-quality content is of vital importance to ensure an enchanting and authoritative guided tour through any collection. Thus we put great effort into transforming written texts into meaningful audio and video content. To this end, we integrate professional male and female voices with music and sound effects to achieve an informative, touching content which delights museum visitors.

DigiTour is produced by DigiKultur Germany

We create strong solutions in museum communications to fit your style and your budget.

DigiTour Features

DigiTour has an elegantly screen design and generously dimensioned navigation buttons.

- The number pad gives you direct access to information: just type in the number from an object label to get more information about the object, the artist, or the historical background.
- The integrated media player gives you full control over the entire content. You can move backwards and forwards or pause – with a slight touch to the screen.
- We've introduced a list function that allows you to browse through all the information in order to find your favorite objects in the collection.
- When you want to know where you are, simply touch the screen and DigiTour shows your location on an integrated floor plan.
- Think about accessibility: with DigiTour you can provide alternative access for handicapped visitors. We produce video tours in sign language for the deaf (BSL, DGS or other) and special audio descriptions for the blind and partially-sighted people.

Recent Projects
